### **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicants' submission filed on April 10, 2002 has been entered.

Applicants' arguments with respect to claims 1, 4, 5 and 7-24 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 4, 5, and 7-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lambert et al. (U.S. Patent No. 6,458,373 B1).

Lambert et al. teach a micellar solution or an emulsion with a particle size of 10 to 500 nm, preferably 10 to 200nm and most preferably 10 to 100 nm comprising chemotherapeutics including podophyllotoxins (etoposide) and their derivatives and analogues, tocopherol and TGPS (d- $\alpha$ -tocopherol polyethyleneglycol 1000 succinate). (abstract, column 3, lines 45-58, column 4, lines 1-3, column 7, lines 39-65, column 8, line 59, column 10, lines 28-33, column 21, Example 23).

Lambert et al. teach use of Applicants' water-soluble polymer, polyoxypropylene-polyoxyethylene copolymer in the above composition. (column 3, lines 59-64).

Lambert et al. teach use any compound including peptides, lipid conjugates/prodrugs, any natural or synthetic molecule which are slightly or completely lipophilic, and any molecules which stimulate the immune system in the above composition. (column 6, lines 54-56).

Lambert et al. teach the amounts of TPGS about 10% in the above composition. (column 21, Example 23).

Lambert et al. do not teach that tocopherol is covalently linked to a water-soluble polymer and the use of composition for treatment of cancer.

However, it would have been obvious to skill artisan to employ well known Lambert et al.'s composition in treatment of cancer since it is formulated with well known chemotherapeutical agent, etoposide and its analogues in most desirable stable solution

formulation. Further, one of ordinary skill in the art would have been motivated with reasonable expectation of success to formulate above composition further comprising any molecules including natural or synthetic since Lambert et al. teach their usefulness and the compatibility in the above composition in general.

For these reasons the claimed subject matter is deemed to fail to patentably distinguish over the state of the art as represented by the cited references. The claims are therefore properly rejected under 35 U.S.C. 103.

None of the claims are allowed.
